PORTFOLIO COMMENTARY & MARKET OUTLOOK

Performance:

Fiscal Year to Date from July 1 to January 31, 2021, the Australian ASX 200 is up +13.6%, and the US S&P500 is up +20.9%. **Your Fund is up net after fees +39.9% (On December 31, 2020, at the half year, it was up 29.2%).**

For the **Month of January 2021**, the Australian ASX 200 was up +0.3%, and the US S&P500 was down -1.0%. **Your Fund was up net after fees +8.3%.**

The portfolio performed very strongly in January in what was a very subdued month for global equity markets. Our high conviction and significant investment in Bed, Bath and Beyond (BBBY) contributed very materially to performance.

As of January 21, the portfolio had a net exposure (delta adjusted) of circa 70.5 plus an exposure to gold and silver of circa 9.0%, uranium of circa 8.5%, and had minimal foreign currency exposure.

The Fund has performed well during the February month to date period.

Portfolio:

Bed Bath and Beyond, one of our highest conviction investments started the month below \$20, peaked north of \$50, and is currently trading at circa \$28. While we believe that the stock could be worth north of \$60 if management executes its clearly defined strategy, we exited our initial position at \$45 as the reason for the rally was not fundamentally driven, and we do not believe the current risk reward was justified at that level. We have since re-established a position at an effective entry price of circa \$24. This has been a fantastic outcome. We will provide a more in-depth overview of the Bed Bath and Beyond thesis in coming newsletters.

We have more recently increased our exposure to cyclicals through investments in companies including Cemex, one of the largest cement producers globally. The portfolio also continues to maintain significant exposures to uranium, through companies including Cameco, Kazatomprom, and Paladin, and to US financials, including JP Morgan and Comerica. We are invested in and continue to identify new opportunities that excite us and fit our asymmetric risk reward profile requirements.

We remain heavily hedged with portfolio protection through futures, put options, rotation hedges and individual stock shorts. Options hedging includes both at the money and deep out of the money put options. **If equity markets were to have a material decline, we would expect the delta of the put options to significantly increase and reduce the net exposure of the Fund very dramatically.** The nature of our protection is such that we are protecting against material market falls as opposed to smaller market pullbacks.

Market Commentary:

The GameStop saga makes complete sense to us. No single person or authority is the definitive oracle on price discovery. Since the dawn of futures markets two thousand years ago, demand and supply determine this. The market is just a meeting that usually happens every day between buyers and sellers. The US equity market is the greatest market in the world. Playing with its ability to function is a terrifying thought. Everyone is pointing fingers. As an analogy, the Buffet effect is fine but if it's someone who is pointing in another direction, then let's lynch him, stop them, investigate them. Wow! What would have happened if Trump got his band on to GameStop?

Investment Objective

The investment objective is to generate superior returns for Unitholders with a focus on risk and capital preservation.

Investment Strategy

The Fund provides investors with exposure to global markets through a long short equity strategy. The strategy overlays fundamental bottom-up stock selection with global macroeconomic and market outlook.

Key Information

Inception Date	1 January 2002
Portfolio Manager	Ashok Jacob & Arik Star
Class A Redemption Price	\$1.8589
Class B Redemption Price	\$1.8170
Liquidity	Quarterly
No Stocks	97
Gross Exposure	224.42%
Net Exposure	70.50%
Management Fee	1.50%
Performance Fee	16.50%
Buy/Sell Spread	0.25%/0.25%

Tactical considerations

Markets now appear to be operating in parallel universes. The lesson from Reddit is somewhat more profound than appears at first sight. The valuations of Reddit stocks is multiples of order what normal fundamental valuation principles dictate. For example, we believe that GameStop has various secular headwinds such as game streaming which could affect its revenues at a seismic level. This would normally lead it to trade at a low earnings and cash flow multiple.

That leaves it with a valuation range of \$10 - 30 at an extreme level. As we well know it trades nearer \$50 today and has been as high as \$400. Why? A share in GameStop became a commodity where there were buyers and sellers at \$400. Today they agree on a price of \$50. Is that crazy? Well, let's look at the parallel universe of revenue multiple stocks. In many cases they do not have good unit economics. Additionally, they may not have an addressable market large enough to justify their enterprise values. Eerily, they have cult like followings and millennial style shareholders who own these companies based on factors such as love of the product, peer group ownership and powerful momentum. They have no interest in valuation principles. The Reddit brigade, the FOMO brigade, the millennial brigade, they all have one thing in common. Zero interest in the investment science of valuation. To us, the GameStop saga is almost like a lightbulb moment. A viciously clarifying example of how the thinking goes in this parallel universe. The "Good News" is that it tells how to manage our exposure to these type of stocks and profit from this phenomenon. Is it going away? Is Social Media going away? It's not, and it's come to Wall Street!

Market outlook

We continue to believe that goods inflation is coming. Central Banks will keep interest rates down. Many industry sectors such as Cyclical and Financials continue to trade at very reasonable levels. The Fund is heavily exposed to this space and we anticipate that it could be a major beneficiary of the fiscal stimuli coming all over the world. Global pent up consumer demand meets Global stimulus meets Global infrastructure spending. It's a trifecta the likes of which no one at any time has seen before.

Market valuations

As a continuation to last month's newsletter, it is important to point out that as we see it, the markets recovery to a reasonable valuation relative to current interest rates is now largely over. This leads us to the view that the market is in the reasonable value zone. In a scenario where 10yr USTs seem to be heading to 1.25%, the market is going to be volatile relative to rates going up and down. Government and Central Bank activity which affects rates could have the effect of whipsawing equity markets for some time.

If there are further signs of inflation coming, we could easily see rates head towards 1.5% which could dampen the animal spirits prevalent in equity markets today. Most at risk is the universe of revenue multiple stocks. Conversely this may lead to a seismic rotation away from growth/tech/froth to value/financials/cyclicals. Possible further stimulus packages in the U.S and all over the world are going to make the rotation all the more likely. We could therefore have the odd scenario where underlying indices are weak but long suffering, underperforming sectors drive equity market performance.

DISCLAIMER

[^] Actual performance for your account may vary from that set out in this newsletter and will vary for investments made in different classes, or at different times throughout the year. Some performance data is estimated and preliminary and subject to change.

^{^^}For the period 1 January 2002 to 30 April 2006, the CPH Group GEMS Portfolio was not operated within a separate fund structure. The underlying investment assets of the CPH Group GEMS Portfolio were owned during that time within corporate entities of the CPH Group for which audited accounts were prepared on an annual basis. Accordingly, in order to provide relevant historical performance information for the period 1 January 2002 to 30 April 2006 (Historical Returns) net returns were calculated on the basis of the actual dollar returns of the CPH Group GEMS Portfolio adjusted to reflect a fund structure similar to the Fund and including all fees. For GEMS B, GEMS A returns have been used between 1 May 2006 and 2 November 2009. The returns of the Fund and the relevant Indices are net of fees, expenses and taxes and assuming distributions are reinvested.

The standard deviation is often used by investors to measure the risk of an asset. The standard deviation is a measure of volatility: the more an asset's returns vary from the average return, the more volatile the asset. A higher standard deviation means a greater potential for deviation of return from the average return of the asset.

The performance figures presented are for the Ellerston Global Equity Managers Fund GEMS A and B Units. The one month return figure may be an estimate and not the final return. This estimate also impacts other performance information provided. Estimated performance figures are preliminary and subject to change. Returns for other classes may differ slightly. Past performance is not indicative of future performance.
