## COMMENTARY

The Ellerston 2050 Fund delivered 5.84% (net) in February, relative to the S&P/ASX Small Ordinaries Industrials Accumulation Index which returned 3.89%. Offshore, we saw the S&P500 pass through 5,000 points reaching record highs and the Nasdaq focus remaining squarely on AI. Interest rates were topical both domestically and offshore, with consensus estimates winding back aggressive rate cut expectations to a more realistic cadence. Resources were weak during the month with iron ore really taking a hit due to fears around a weakening Chinese economy.

Stepping away from the macro news, February was also reporting season, resulting in a highly catalyst rich / news flow heavy period. In January, we outlined several themes which we thought would play out, including those companies that could show that their topline outpaced industry conditions being rewarded; M&A; and outlook statements / guidance being well received. As an overarching statement, we think Australian corporates shrugged of another reporting season and navigated what was expected to be slowing demand and a higher interest rate environment in reasonable fashion.

In retail, we saw the divergence in share price performance between companies that had high expectations going into the result, versus the leverage seen by some under-loved / low expectations companies, or highly shorted names like Temple & Webster, Lovisa and Adairs. In some of the high growth / crowded names, we saw some wild share price moves as companies with high expectations missed key metrics, such as Breville, Data3 and GUD Holdings. As we had anticipated, M&A remained elevated with a number of bids announced, including Altium, APM limited, Boral and Aussie Broadband's bid for Superloop. What was more unexpected during February was the level of management turnover, with Bapcor losing pretty much all key management and Fletcher Building losing the Chair and CEO to name a few.

Overall, reporting season felt like it was coming back towards more normal cycles, with share price performance reflecting fundamental earnings updates. This should mean we are back into a stock pickers market which plays into our strengths.

Turning to stocks, Audinate (AD8 AU) delivered a 40% return in February on the back of its 1H24 results. AD8 delivered a strong 1H which saw revenue +11% and EBITDA +20% ahead of consensus estimates. The group continues to take share and grow its position as the industry standard for networked audio products. Additionally, the business achieved its short-term video targets six months ahead of expectations, showing initial traction for this emerging segment. The company fits within the fund as it enables digitalisation of traditional audio systems, which is primarily done through a significant reduction in physical cabling for commercial installed audio and video systems.

RPM Global (RUL AU) had a strong month, delivering a 24% return in February. The business reported a solid 1H result, delivering revenue growth of 20% year-on-year and reported its total contracted value now sits at A\$14.2m. Furthermore, the business noted it has a robust pipeline of software deals, which bodes well for its key selling period into financial year-end. The group reiterated its FY24 revenue and earnings guidance, which represents meaningful growth and operating leverage to flow through over the 2H. It fits within the 2050 fund due to its ESG advisory services and software which helps companies reduce their carbon emissions.

Aussie Broadband (ABB AU) was a standout performer this month, putting on almost 20% following a catalyst rich period. The company reported a solid 1H24 result, with strong subscriber growth momentum prompting an upgrade to their full year guidance. This combined with the approval of the Symbio acquisition drove material upgrades in analyst expectations. The next move caught the market off guard, with Aussie lobbing a takeover bid for rival listed telco Superloop (SLC AU). From a strategic standpoint, we think the acquisition stacks up, and would put ABB at approximately one million subscribers and a market share over 11% with material synergies to be unlocked. While SLC rejected the proposal, we suspect ABB will try again at some point; it makes too much sense not to. ABB is an excellent case study for our investment process, where we identified a high-quality business with a strong management team and a clear plan for growth; invested in the company before it was listed; and have stayed on the journey, adding to our position along the way. The stock fits in our 2050 portfolio because broadband and telecommunication infrastructure will enable remote working, reducing travel related emissions.
